***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker (US Patent 6,278,455) and Harvill et al. (US Patent 6,559,845.) Baker describes a pictorial interface for accessing information within an electronic file system in which an animated object provides information regarding a pictorial object to a user from a file directory. Baker does not explicitly disclose the specific means by which to create an animated object for this purpose. Harvill describes a method of creating an animated object with a wire frame model and a texture map (Col 5 Lines 38-46). It would have been obvious to those of ordinary skill in the art at the time the invention was made to use an animated object constructed as described by Harvill in the system described by Baker because an animated object constructed from a wire frame and texture map is much more adaptable and useful in computer graphics environments than a traditional (made from a series of static images) animated object.

3. With regard to Claims 1 and 2, Baker describes an animated character 22 that may be directed to provide information regarding an image 12 from a directory (Col 12 Lines 51-64). Baker describes one embodiment of the invention in which the information provided in the form of audio segments (Col 17 Lines 3-14).

Art Unit: 2671

4. With regard to Claim 3, Baker describes the animated object as being overlaid on the image (Col 13 Lines 17-18).

5. With regard to Claim 4, Baker describes the method of directing the animated object to provide the information by selecting objects within the image (Col 13 Lines 65-67).
